#### **DETAILED ACTION**

#### Claims

1. Claims 1-20 are pending. Claims 21-28 have been cancelled.

## Rejections Withdrawn

- 2. The 35 USC 112 rejection of claims 2 and 12 is withdrawn in view of applicants' arguments in the 22 October 2004 response (the last response). The examiner notes that applicants intend for the phrase "fluorinated ethylene propylene" to covers fluorinated copolymers.
- 3. The 35 USC 103 rejection of claims 1-20, as unpatentable over Kasprzyk et al (WO 90/14046) in view of Gore (US 4,187,390) and House et al (US 4,877,661), is withdrawn in response to applicants' arguments in the last response.

## New Rejections

## Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Application/Control Number: 09/510,937

Art Unit: 1772

5. Claims 1-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 19, 23-25 and 27-38 of U.S. Patent No. 5,752,934 in view of Gore (US 4,187,390).

The '934 patent claims recite balloons of porous polytetrafluoroethylene (PTFE) whose pores are filled with an elastomeric material (patent claims 19, 23-25 and 27-38. It fails to claim nodes interconnected by fibrils or multiple layers of porous PTFE.

Gore teaches porous PTFE having a microporous structure of nodes interconnected by fibrils (abstract). Its PTFE yields high strength articles.

The patents are analogous because they both deal with balloons made of porous PTFE.

It would have been obvious to one having ordinary skill in the art at the time of the invention to employ the node and fibril containing PTFE of Gore in the balloons of the '934 patent in order to strengthen them.

The motivation to employ the node and fibril containing PTFE of Gore in the balloons of the '934 patent is found in the Gore abstract, where it teaches that high strength articles are made from its porous PTFE.

It is deemed desirable to make balloons having high strength so that they have longer useful lives.

The use of multiple layers of porous PTFE would be an obvious matter of engineering choice depending upon how strong one wanted the balloons to be.

Art Unit: 1772

### Conclusion

Any inquiry concerning this communication should be addressed to Sandra M. Nolan-Rayford, at telephone number 571/272-1495. She can normally be reached Monday through Thursday, from 6:30 am to 4:00 pm, Eastern Time.

If attempts to reach the examiner are unsuccessful, her supervisor, Harold Pyon, can be reached at 571/272-1498.

The fax number for patent application documents is 703/872-9306.
